Summary

–

•Cybersecurity and Network Specialist with a robust technical foundation, reinforced by 10 years of service as a military Non-Commissioned Officer specializing in radar systems and electronics. Certified ISC2 Candidate with practical, hands-on expertise in network defense, Linux environments, system troubleshooting, vulnerability analysis (such as CVE-2011-3192 remediation), and Python-based security automation. Adept at combining strict discipline, operational precision, and modern technical proficiencies to secure digital infrastructures and manage complex technical environments.

Skills

Security & Networking: Cybersecurity Fundamentals, Network Defense, Vulnerability Assessment, SIEM (Wazuh), Packet Analysis (Wireshark), Scanning (Nmap), Web App Testing (Burp Suite), CCNA Networking, TCP/IP, Routing & Switching.
Tools & Technologies: Kali Linux, VirtualBox, VMware, Python (Automation & Scripting), Git, GitHub, Linux/Terminal, Docker, HTML, CSS, JavaScript, Bash.
Core Competencies: Technical Troubleshooting, Radar Systems & Electronics, Hardware Maintenance, Risk Mitigation, Team Leadership, Operational Planning.
Languages: Arabic (Native), French (Professional), English (Professional).

Experience ___Non-Commissioned Officer / Radar & Electronics Technician

Military Service

Oran, Algeria

2015 – 2025 *(10 years of service)*

- Served for a decade as a military Non-Commissioned Officer specializing in the operation, calibration, maintenance, and troubleshooting of complex radar systems and precision electronics.
- Managed critical electronic hardware, performed root-cause diagnostics on sophisticated technical failures, and ensured high equipment availability under demanding operational conditions.
- Implemented strict security protocols, standard operating procedures, and compliance measures for sensitive technical assets and infrastructure.
- Leveraged systematic analytical skills to isolate electronic signal anomalies, configure hardware components, and maintain flawless operational readiness.

Projects

Home Cybersecurity Laboratory: Configured and managed an advanced virtualized lab environment utilizing Kali Linux, VirtualBox, and VMware for vulnerability scanning, penetration testing, and packet analysis with Wireshark and Nmap.

Vulnerability Analysis & Remediation: Investigated and analyzed specific web server and modem vulnerabilities (such as Apache Byte-Range DoS CVE-2011-3192), drafting technical remediation workflows and mitigation strategies.

Security Automation Scripts: Developed custom Python scripts for network socket testing, multi-threaded scanning, security log parsing, and system administrative automation.

SIEM & Monitoring Deployment: Deployed and tested Wazuh SIEM solutions for log analysis, endpoint monitoring, and threat detection simulation.

Personal Portfolio Website: Designed, built, and deployed a custom technical portfolio hosted on GitHub Pages (`mohamedyacineboucheteur-ui.github.io`) using HTML, CSS, and JavaScript to showcase security projects and lab documentations.

. Education

ISC2 Candidate
ISC2

- **Active candidate status reviewing preparation materials for the Certified in Cybersecurity (CC) designation.**

Google Cybersecurity Professional Certificate / Foundations of Cybersecurity
Google / Coursera

- **Completed foundational modules and coursework covering security models, threat intelligence, and defensive tools.**

Networking Basics (CCNA Preparation)
Cisco Networking Academy

- **Completed 22 hours of core networking fundamentals, routing, and switching concepts in preparation for CCNA 200-301.**

Université d'Oran 1 Ahmed Ben Bella
Oran, Algeria

- **University-level coursework in Commercial Sciences, Management, and Economics.**

Baccalaureate Diploma
Algeria
